HABCOLog

HABCOLog IS A CLOUD-BASED TEMPERATURE RECORDER AND ALARM SYSTEM. ALL PARAMETERS CAN BE SET THROUGH A WEB-BASED APPLICATION ON ANY OPERATING PLATFORM

"HABCOLog" is a two channel temperature recorder and alarm system with one internal and one external sensor. It is powered by 2 replaceable AA batteries for up to 6 years and connects directly to Wi-Fi.

The external sensor of "HABCOLog" comes with a NIST traceable calibration test certificate and is tagged with a unique identification number that enables online lookup of the certificate. The certificate is valid for 24 months in storage and 12 months in use. The detachable external sensor can be replaced with a new sensor and a fresh certificate in 10 seconds by the user.

More than an accurate meter and a reliable logger, "HABCOLog" is also a cloud-based alarm system. All setting parameters like measurement intervals, upload intervals, minimum and maximum allowed temperature thresholds can be set through a web-based application on any platform. It sends out phone calls, text messages and email alarms to an unlimited number of recipients as soon as temperature exceeds or falls below pre-set limits. It also provides access to the records history, graphs and periodical reports.

Its hardware and software installation is very easy and does not require any specific tools or applications.
