Clinical Services are the Future of Pharmacy

Your pharmacy is more than a prescription filler; it is a healthcare destination. As your patients continue to seek convenience and accuracy in diagnosis and treatment, **testing just makes sense**. Independent pharmacies don't have to look further than the SiteLabs™ Digital Platform, an all-in-one solution that automates every step of the testing process.

Covid Testing with SiteLabs™: A Real Pharmacy's Experience

Covid may look different now than in 2020, but we are certainly not done with it! Pharmacies like our client in Texas seized the opportunity to offer Covid testing services in November 2021, and over four months generated \$33,046 in revenue at an 80.5% (\$26,602) margin.

This pharmacy now has the system in place to offer additional POC tests like Flu, Mono, Strep, Pregnancy and many more.

Your cost to set up, implement, and maintain: \$0

Check Out the Test Kits We Offer:

Use the QR codes below or visit sitelabsglobal.com

Our digital platform streamlines the entire testing workflow so you can offer an efficient and profitable POC testing program

The SiteLabs™ Digital Platform Automates:

Scheduling

Payments

Adjuvanted to help prevent seasonal influenza in adults 65+¹

**FLUAD[®]**
QUADRIVALENT
influenza vaccine,
adjuvanted

Designed to strengthen, broaden, and lengthen the duration of the immune response²⁻⁴

Learn more at fluad.com

For more information, please see Important Safety Information below and the Brief Summary on adjacent page.

INDICATION and IMPORTANT SAFETY INFORMATION

INDICATION AND USAGE

FLUAD[®] QUADRIVALENT is an inactivated influenza vaccine indicated for active immunization against influenza disease caused by influenza virus subtypes A and types B contained in the vaccine. FLUAD QUADRIVALENT is approved for use in persons 65 years of age and older. This indication is approved under accelerated approval based on the immune response elicited by FLUAD QUADRIVALENT.

IMPORTANT SAFETY INFORMATION

CONTRAINDICATIONS

Do not administer FLUAD QUADRIVALENT to anyone with a history of severe allergic reaction (e.g. anaphylaxis) to any component of the vaccine, including egg protein, or to a previous influenza vaccine.

WARNINGS AND PRECAUTIONS

If Guillain-Barré syndrome (GBS) has occurred within 6 weeks of receipt of prior influenza vaccine, the decision to give FLUAD QUADRIVALENT should be based on careful consideration of the potential benefits and risks.

Appropriate medical treatment and supervision must be available to manage possible anaphylactic reactions following administration of the vaccine.

The immune response to FLUAD QUADRIVALENT in immunocompromised persons, including individuals receiving immunosuppressive therapy, may be lower than in immunocompetent individuals.

Syncope (fainting) may occur in association with administration of injectable vaccines including FLUAD QUADRIVALENT. Ensure procedures are in place to avoid injury from falling associated with syncope.

Vaccination with FLUAD QUADRIVALENT may not protect all vaccine recipients against influenza disease.

ADVERSE REACTIONS

The most common ($\geq 10\%$) local and systemic reactions in elderly subjects 65 years of age and older were injection site pain (16.3%), headache (10.8%) and fatigue (10.5%).

To report SUSPECTED ADVERSE REACTIONS, contact Seqirus USA Inc. at 1-855-358-8966 or VAERS at 1-800-822-7967 or www.vaers.hhs.gov.

Before administration, please see the full US Prescribing Information for FLUAD QUADRIVALENT.

FLUAD® QUADRIVALENT (Influenza Vaccine, Adjuvanted)
Injectable Emulsion for Intramuscular Use
2021-2022 Formula

BRIEF SUMMARY OF PRESCRIBING INFORMATION

Consult the full US Prescribing Information for complete product information.

INDICATIONS AND USAGE

FLUAD QUADRIVALENT is an inactivated influenza vaccine indicated for active immunization against influenza disease caused by influenza virus subtypes A and types B contained in the vaccine. FLUAD QUADRIVALENT is approved for use in persons 65 years of age and older. This indication is approved under accelerated approval based on the immune response elicited by FLUAD QUADRIVALENT. Continued approval for this indication may be contingent upon verification and description of clinical benefit in a confirmatory trial.

For intramuscular injection only.

CONTRAINDICATIONS

Do not administer FLUAD QUADRIVALENT to anyone with a history of severe allergic reaction (e.g. anaphylaxis) to any component of the vaccine, including egg protein, or to a previous influenza vaccine.

WARNINGS AND PRECAUTIONS

Guillain-Barré Syndrome: If Guillain-Barré syndrome (GBS) has occurred within 6 weeks of receipt of prior influenza vaccine, the decision to give FLUAD QUADRIVALENT should be based on careful consideration of the potential benefits and risks. The 1976 swine influenza vaccine was associated with an elevated risk of GBS. [see Reference (1)] Evidence for a causal relationship of GBS with other influenza vaccines is inconclusive; if an excess risk exists, it is probably slightly more than 1 additional case per 1 million persons vaccinated.

Preventing and Managing Allergic Reactions: Appropriate medical treatment and supervision must be available to manage possible anaphylactic reactions following administration of the vaccine.

Altered Immunocompetence: The immune response to FLUAD QUADRIVALENT in immunocompromised persons, including individuals receiving immunosuppressive therapy, may be lower than in immunocompetent individuals.

Syncope: Syncope (fainting) may occur in association with administration of injectable vaccines including FLUAD QUADRIVALENT. Ensure procedures are in place to avoid injury from falling associated with syncope.

Limitations of Vaccine Effectiveness: Vaccination with FLUAD QUADRIVALENT may not protect all vaccine recipients against influenza disease.

ADVERSE REACTIONS

The most common (≥10%) local and systemic reactions in elderly subjects 65 years of age and older were injection site pain (16.3%), headache (10.8%) and fatigue (10.5%).

Clinical Trials Experience: Because clinical trials are conducted under widely varying conditions, the adverse reaction rates observed in the clinical trials of a vaccine cannot be directly compared to rates in the clinical trials of another vaccine and may not reflect rates observed in clinical practice.

The safety of FLUAD QUADRIVALENT was evaluated in two clinical studies in 4269 elderly subjects 65 years of age and older. Study 1 (NCT02587221) was a multi-center, randomized, observer-blind, non-influenza comparator-controlled efficacy and safety study conducted in 12 countries during the 2016-2017 Northern Hemisphere and 2017 Southern Hemisphere seasons. In this study, 3381 subjects received FLUAD QUADRIVALENT and 3380 subjects received a US-licensed non-influenza comparator vaccine (Tetanus Toxoid, Reduced Diphtheria Toxoid and Acellular Pertussis Vaccine, Boostrix® [GlaxoSmithKline Biologicals]).

The mean age of subjects at enrollment was 72 years, 62% were female, 48% White, 34% Asian, 16% Other, 2% American Indian/Alaska Native, and 18% of Hispanic/Latino ethnicity.

Solicited local and systemic adverse reactions were collected for 7 days after vaccination in a subset of 665 subjects who received FLUAD QUADRIVALENT and 667 subjects who received the comparator vaccine. The percentages of subjects reporting solicited local adverse reactions are presented in Table 1a and systemic adverse reactions are presented in Table 1b. Onset usually occurred within the first 2 days after vaccination. The majority of solicited reactions resolved within 3 days.

Table 1a. Percentages of Subjects Reporting Solicited Local Adverse Reactions^a in the Solicited Safety Population^b within 7 Days of Vaccination (Study 1)

| Local (Injection site) Reactions ^c | FLUAD QUADRIVALENT N=595-659 | Non-Influenza Comparator Vaccine N=607-664 |
|---|---------------------------------|--|
| Injection site pain | 16.3 | 11.2 |
| Erythema ≥25mm | 3.8 | 1.8 |
| Induration ≥25mm | 4.0 | 2.6 |
| Ecchymosis ≥25mm | 0.5 | 0.7 |

Study 1: NCT02587221

Abbreviation: N=number of subjects with solicited safety data

Non-Influenza Comparator Vaccine = combined Tetanus Toxoid, Reduced Diphtheria Toxoid and Acellular Pertussis Vaccine, Boostrix® (GlaxoSmithKline Biologicals)

^a All solicited local adverse events reported within 7 days of vaccination are included

^b Solicited Safety Population: all subjects in the exposed population who received a study vaccine and provided post-vaccination solicited safety data

^c Severe reactions of each type were reported in 1.1% or fewer subjects receiving FLUAD QUADRIVALENT; severe reactions of each type were also reported in the comparator group at similar percentages. Severe definitions: Erythema, Induration and Ecchymosis = >100 mm diameter; Injection site pain = prevents daily activity.

Table 1b. Percentages of Subjects Reporting Solicited Systemic Adverse Reactions^a in the Solicited Safety Population^b within 7 Days of Vaccination (Study 1)

| Systemic Reactions ^c | FLUAD QUADRIVALENT N=595-659 | Non-Influenza Comparator Vaccine N=607-664 |
|---------------------------------|---------------------------------|--|
| Headache | 10.8 | 8.3 |
| Fatigue | 10.5 | 8.8 |
| Myalgia | 7.7 | 6.1 |
| Arthralgia | 7.3 | 6.6 |
| Chills | 5.0 | 3.9 |
| Diarrhea | 4.1 | 3.0 |
| Nausea | 3.8 | 2.3 |
| Loss of appetite | 3.6 | 3.6 |
| Fever ≥100.4°F (38°C) | 1.7 | 1.2 |
| Vomiting | 0.8 | 1.1 |

Study 1: NCT02587221

Abbreviation: N=number of subjects with solicited safety data

Non-Influenza Comparator Vaccine = combined Tetanus Toxoid, Reduced Diphtheria Toxoid and Acellular Pertussis Vaccine, Boostrix® (GlaxoSmithKline Biologicals)

^a All solicited systemic adverse events reported within 7 days of vaccination are included

^b Solicited Safety Population: all subjects in the exposed population who received a study vaccine and provided post-vaccination solicited safety data

^c Severe reactions of each type were reported in 1.1% or fewer subjects receiving FLUAD QUADRIVALENT; severe reactions of each type were also reported in the comparator group at similar percentages. Severe definitions: Nausea, Fatigue, Myalgia, Arthralgia, Headache, and Chills = prevents daily activity; Loss of appetite = not eating at all; Vomiting = 6 or more times in 24 hours or requires intravenous hydration; Diarrhea = 6 or more loose stools in 24 hours or requires intravenous hydration; Fever = ≥102.2°F (39°C).

Unsolicted adverse events (AEs) were collected for all subjects for 21 days after vaccination. Related unsolicited AEs were reported by 303 (9.0%) and by 261 (7.7%) of the subjects for FLUAD QUADRIVALENT and Boostrix, respectively. For FLUAD QUADRIVALENT, injection site pain and influenza-like illness were the only unsolicited adverse reactions reported in ≥ 1% of subjects (1.7% and 1.5%, respectively).

Serious adverse events (SAEs) and potentially immune-mediated adverse events of special interest (AESIs) were collected up to 366 days after vaccination. SAEs were reported by 238 (7.0%) FLUAD QUADRIVALENT recipients and 234 (6.9%) comparator recipients. There were no SAEs, AESIs or deaths in this study that were related to FLUAD QUADRIVALENT.

Study 2 (NCT03314662) was a multicenter, randomized, double-blind, comparator-controlled study conducted during the 2017-18 Northern Hemisphere influenza season. In this study, 888 subjects received FLUAD QUADRIVALENT, 444 subjects received the licensed adjuvanted trivalent vaccine (aTIV-1 - FLUAD® (trivalent formulation)) and 444 subjects received an adjuvanted trivalent influenza vaccine with an alternate B strain (aTIV-2).

The mean age of subjects at enrollment who received FLUAD QUADRIVALENT was 72.5 years. Female subjects represented 56.6% of the study population and the racial distribution of subjects was 91.6% Caucasian, 7.0% Black or African American, and ≤ 1% each for Asian, Native Hawaiian or Pacific Islander, American Indian or Alaska Native or Other.

Solicited local and systemic adverse reactions reported within 7 days after vaccination were similar to those reported for Study 1. Unsolicited AEs were collected for 21 days after vaccination. Related unsolicited AEs were reported by 39 (4.4%) and by 17-19 (3.8%-4.3%) of subjects administered FLUAD QUADRIVALENT or aTIV, respectively. For FLUAD QUADRIVALENT, injection site bruising (1.0%) was the only unsolicited adverse reaction reported in ≥ 1% of subjects.

Serious AEs and AESIs were collected up to 181 days after vaccination. Within 6 months after vaccination, 37 (4.2%) FLUAD QUADRIVALENT recipients and 18-28 (4.1%-6.3%) aTIV recipients experienced an SAE. There were no SAEs, AESIs or deaths in this study that were related to the study vaccine. There were no AEs leading to withdrawal from the study.

Postmarketing Experience: There are no postmarketing data available for FLUAD QUADRIVALENT. However, the postmarketing experience with FLUAD (trivalent formulation) is relevant to FLUAD QUADRIVALENT because both vaccines are manufactured using the same process and have overlapping compositions.

Because these events are reported voluntarily from a population of uncertain size, it is not always possible to reliably estimate their frequency or establish a causal relationship to the vaccine.

Blood and lymphatic system disorders: Thrombocytopenia (some cases were severe with platelet counts less than 5,000 per mm³), lymphadenopathy

General disorders and administration site conditions: Extensive swelling of injected limb lasting more than one week, injection site cellulitis-like reactions (some cases of swelling, pain, and redness extending more than 10 cm and lasting more than 1 week)

Immune system disorders: Allergic reactions including anaphylactic shock, anaphylaxis, and angioedema

Musculoskeletal and connective tissue disorders: Muscular weakness

Nervous systems disorders: Encephalomyelitis, Guillain-Barré Syndrome, convulsions, neuritis, neuralgia, paresthesia, syncope, presyncope

Skin and subcutaneous tissue disorders: Generalized skin reactions including erythema multiforme, urticaria, pruritus or nonspecific rash

Vascular disorders: Vasculitis, renal vasculitis

DRUG INTERACTIONS

Concomitant Use With Other Vaccines: No clinical data on concomitant administration of FLUAD QUADRIVALENT with other vaccines is available.

If FLUAD QUADRIVALENT is given at the same time as other injectable vaccine(s), the vaccine(s) should be administered at different injection sites.

Do not mix FLUAD QUADRIVALENT with any other vaccine in the same syringe.

Concurrent Use With Immunosuppressive Therapies: Immunosuppressive or corticosteroid therapies may reduce the immune response to FLUAD QUADRIVALENT.

USE IN SPECIFIC POPULATIONS

Pregnancy

Risk Summary

FLUAD QUADRIVALENT is not approved for use in persons < 65 years of age. There are insufficient human data to establish whether there is a vaccine-associated risk with use of FLUAD QUADRIVALENT in pregnancy.

There were no developmental toxicity studies of FLUAD QUADRIVALENT performed in animals. A developmental toxicity study has been performed in female rabbits administered FLUAD (trivalent formulation) prior to mating and during gestation. A 0.5 mL dose was injected on each occasion (a single human dose is 0.5 mL).

Lactation

Risk Summary

FLUAD QUADRIVALENT is not approved for use in persons < 65 years of age.

No human or animal data are available to assess the effects of FLUAD QUADRIVALENT on the breastfed infant or on milk production/excretion.

Pediatric Use

Safety and effectiveness of FLUAD and FLUAD QUADRIVALENT (same manufacturing process and overlapping composition with FLUAD) were evaluated in clinical trials conducted in children 6 months to <72 months of age. Data from these trials are inconclusive to demonstrate the safety and effectiveness of FLUAD QUADRIVALENT in children 6 months to <72 months of age. The safety and effectiveness of FLUAD QUADRIVALENT in infants less than 6 months of age and in children older than 72 months of age have not been evaluated.

Geriatric Use

Safety and immunogenicity of FLUAD QUADRIVALENT have been evaluated in adults 65 years of age and older.

The VaxServe® Partnership

You don't see your patients as just *patients*.

You see them as more than that. You see them as what they are—your neighbors and even your friends. It's this mutual trust and understanding, along with exceptional customer service, that you've built your business upon.

Like you, VaxServe appreciates the importance of strong partnerships. It's values like this one, which you instill through your day-to-day interactions with patients, that will strengthen our partnership with you.

At VaxServe, we offer quality service and educational resources along with vaccines at a competitive price.

Working together has its advantages

We have the expertise

Our capability as an immunization solutions provider comes with 20 years of extensive experience as the largest non-hospital vaccine distributor in the United States. As a wholly-owned subsidiary of Sanofi Pasteur Inc., we're backed by their decades of experience, heritage, reliability, and dependability.

It's because of this partnership and tenure in the flu vaccine market that we can help enhance the experience and provide age-specific vaccine options for your patients—all at competitive pricing.

We want to help grow your business

One of the best ways to expand your business is by growing the relationships you have with your patients. We aim to provide you with the tools you need to do this by:

- Helping to increase both adult and adolescent immunization rates
- Working with you to create a year-round immunization program
- Providing you with clinical and operational support for your immunization program
- Delivering patient and staff education materials, reminder/recall tools, and support for navigating the evolving role of community pharmacy

We're dedicated to the success of your immunization campaign

Our goal as a specialty distributor and solutions provider is to support your expansion of vaccination programs. For nearly two decades, we've successfully developed a range of tools and materials for pharmacy immunization programs, including:

- Influenza
- Travel
- Tdap
- Immunizations focusing on seniors, adolescents, and pediatrics

We simplify ordering and implementation

We understand your number one priority is maintaining relationships with your patients, which is why we've streamlined the vaccine ordering process to make it as simple as possible. We're able to assist you whenever you need help.

Is your pharmacy looking for NEW CUSTOMERS?

Have your pharmacy participate in the growing animal pharmacy market projected to be over \$18 billion dollars in 2022. Your pharmacy can provide its customers savings resulting in reduced prices and with greater convenience than traditional sources. Never any fees or monthly charges to be a member of Animal Med Express!

Did you know that Wholesale Orders can be placed online through your retailer login? This simplifies the Wholesale Order process for you and reduces the amount of time required to have your order processed! Contact us for more information or to setup an account.

Contact Us: sales.info@animalmedexpress.com | (615) 538-1424

- Animal Prescription, OTC and Nutritional products, FDA and EPA Approved as required.
- Receive the order at your pharmacy counter with existing staff – our web interface makes it easy to order products.
- Did you know that 68% of US Households (your customers) own at least one pet? Provide them pet meds from their trusted pharmacist – YOU!

- The monopoly of the vet selling animal prescriptions has changed! 42 states now have laws requiring the vet to issue a script to the animal owner.
- Typical margins for your pharmacy are in the range of 20-30%!
- Animal Med Express provides an extensive inventory of pet medications, OTC products and Nutritional Supplements.

RIA Fiduciary 401k Plan Option™

Executive Summary

Hahn Financial Group, Inc., a Registered Investment Advisor, offers 401k plans that provide timely, accurate, and responsive retirement plan services. Plan design includes low cost and fee transparency. 3(38) Fiduciary Investment Manager services provided by Wealth Management LLC.

How does this plan benefit the employer?

Lower cost

- **Elimination of high-cost funds:** The plan uses only institutional class funds
- **Lower cost of administration:** The bundled RIA solution is generally lower cost than those provided by an insurance company or payroll provider
- **Transparent, easy-to-understand fees:** No hidden fees or revenue sharing

More employer services

- **Single point of contact:** You get to know the consultant working on your plan
- **USA-based customer service:** no offshore call centers
- **Education for employees:** custom website provides education and online services for employee access at any time
- **Fiduciary coverage:** 3(38) Fiduciary Investment Manager, Wealth Management LLC, selects and monitors the investments, including professionally managed portfolios

When can an employer group join?

- Any calendar month

Why would an employer participate?

- **Philosophy:** There is a difference between having something done, and having it done as well as it could or should be done
- **Service:** Striving to exceed expectations for timeliness, accuracy, and responsiveness
- **Plan design:** TPA professional experience and qualifications in plan design
- **Performance:** Screening process evaluates 18,000 funds to determine lineup
- **Price/fees:** Transparent fees tend to lead to lower costs
- **Employee outcomes:** Plan design and a transparent lower fee structure may drive toward better employee retirement outcomes

What about an employer's current plan?

- Current plan may be transferred, rolled, or converted to the new 401k plan

What if an employer does not have a current plan?

- Start-up plans and start-up advice available

Pharmacy Insurance Network Mission Statement

Insuring the continued success of the independent pharmacy industry by dispensing an exclusive network of specialized business insurance options to enhance the protection of and increase the profitability of independent pharmacy owners across the country.

Protect Your Assets

Safeguard Vaccines, Irreplaceable Samples, and Sensitive Environments with OneVue Sense™

- **Temperature Range:** Meet any storage unit temperature requirements with sensors that monitor from -328 °F to 302 °F (-200 °C to 150 °C)
- **Real-Time Alerts:** Stay informed and updated with local device alarms plus phone call, text message, and email alerts for out-of-range conditions
- **Reporting:** Limit manual paperwork with automated cloud-based data logging and on-demand report generation for auditing and compliance

OneVue Sense Environmental Monitoring

Beyond temperature monitoring, the OneVue Sense portfolio offers additional environmental monitoring solutions like **Differential Pressure** Sensors to help ensure a sterile environment in compounding pharmacies. Also, **Indoor Air Quality**, **Contact Closure**, and **Water Leak** monitoring can be easily added to the OneVue Sense system and have the same alert and data logging capabilities to make for safe, efficient, and compliant facilities.

Exclusive CBD for Pharmacies

Building off Medterra's success, Medterra Clinical is designed specifically for those in need of the most relief. With higher strengths, powerful ingredient blends, and potent blends of minor cannabinoids, these most advanced CBD products were developed with Medterra's Medical Advisory Board and are available exclusively to Independent Pharmacies and Medical Offices.

Advanced Ingredients. Remarkable Results.

Each formulation is designed with the same quality standards of Medterra. Using hemp-derived CBD, grown, harvested, extracted, and manufactured right here in the U.S.A, they ensure the products have no THC and are third party tested, so your customers can feel reassured and enjoy high quality CBD products.

Medterra's proprietary whole-plant extraction process to squeeze out every last bit of the hemp plant's beneficial compounds while filtering out the THC creates the ultimate CBD extract, with a 10:1 ratio of CBD to minor cannabinoids, which makes a great option for customers looking to get well-rounded benefits.

These statements have not been evaluated by the Food and Drug Administration.
This product is not intended to diagnose, treat, cure, or prevent any disease.

Top-Selling Products

Clinical Cooling Cream 1500mg

Medterra's famous Cooling Cream, twice as strong! Formulated to help CBD penetrate the skin, Medterra's Clinical Cooling Cream combines CBD with a blend of powerful ingredients to provide rapid relief.

Cannabinoid Blend Tincture Drops 3500mg, Citrus

CBD with a blend of other potent cannabinoids including CBG, CBN, CBC, and CBDv to deliver broader benefits to your customers' daily routine.

WONDERING WHAT YOUR PHARMACY IS WORTH?

There are many reasons to get a
pharmacy valuation:

- Thinking about selling
- Looking to buy
- Buying out a partner
- Seeking a loan
- Want to see what your business is worth

No matter the reason, PRS can help!

Take advantage of a **FREE CONSULTATION** with
one of our valuation experts!
